

Acupuncture is NOT a substitute for conventional medical diagnosis and treatment. Techniques commonly employed in the application of acupuncture:  
- Acupuncture needling – treatment will consist of the insertion of sterile disposable needles at specific sites on the body. Stimulation of said needles may be by manipulation, electrical stimulation or the application of warming substances (moxa) on the needle itself. - Auxiliary / Associated therapies – massage, assisted stretching, topical application of liniments

There is no guarantee that acupuncture will help any condition. Certain medications and social habits may decrease the beneficial effects of acupuncture. These include the use and abuse of alcohol, tobacco, steroids, painkillers, narcotics, stimulants, antidepressants, psycho-pharmaceuticals and illegal drugs.

I, \_\_\_\_\_, certify that I have read and understood the statements above. I also certify that I have informed my acupuncturist of all known physical, mental and medical conditions and medications, and I will keep her updated on any changes.
